

WHAT ARE WE ABOUT

LUKA Consulting (PTY) LTD, we are an environmental authorization company focusing on expedited WULA authorizations and holistic water use advisory services. Although water use authorizations for all agricultural activity are our sweet spot, our service offering also includes EIAs and public participation. We strive to bridge the gap between the individual farmers operational requirements and the Department of Water and Sanitation regulatory parameters.

This is achieved through the provision of tailored solutions for all our clients across the agricultural spectrum, where we oversee the authorization of all the Water use activities on behalf of our clients from inception through to delivery. This would include the verification and validation of the existing lawful use or permits (V&V) , stream flow reduction activities (SFRA) and permits for timber and new water use license applications at exceptionally quicker turnaround times .Furthermore ,we have experience with assisting farmers with compliance and the facilitation of the transformation of the irrigation boards to water use associations and the development of bulk dams for the said associations .
