

Water and Wastewater Treatment Solutions

As a pioneer in the water industry NuWater is a specialist in advanced water treatment solutions focusing on medium to large scale capacities for a variety of water sources including ground, surface, sea, industrial wastewater and effluent. NuWater is able to customise solutions specific to the treatment requirements of its clients.

NuWater offers a range of decentralise and rapidly deployable water treatment solutions. The additional advantage of NuWater's modular solutions is the ease of relocating and redeploying the units elsewhere, ability to provide additional flexibility when treating ever changing feedwater sources.

Making use of the latest innovative technologies and best in class equipment, NuWater has positioned itself as industry experts in water filtration and treatment. This includes but not limited to screening, biological, clarifiers, DAF, multi-media filtration, cartridge filtration, ultrafiltration, reverse osmosis, seawater desalination systems, Industrial wastewater and sewerage treatment plants.

For additional information please feel free to contact us.

In order for NuWater to provide input on a possible solution, information such as size, cost and delivery the following, as a minimum would be required:

-  Detailed water analysis
-  Specifications required after treatment
-  Quantity of water needed per hr. & per day
-  Feed water source/type
